

What, in general, interests you??

What question can you ask?

What idea do you have that could  
answer your question?

What can you measure?

Que te interesa en general?

Que pregunta puedes pregentar?

Que idea tienes que puedan  
contester tus preguntas?

Que puedes medir?

# Steps for doing a science project

- Ask a question that interests you
- Do some reading about it
- Make a prediction (hypothesis)
- Plan an experiment to test your question
- Do the experiment and **measure the result**
- **Change one thing** and measure the result
- Test each change **several times** (many trials)
- Do your results prove your prediction? If not, why?
